

Answer Key

The Intelligence of Crows

TED Lectures Note-taking Activity

1. A synanthropic species is one that flourishes near humans.
2. To get the crows to do something useful.
3. Increasing.
4. She made a tool from a length of wire. Something she had not been taught to do.
5. It is remarkable, for it shows that crows remember people's faces.
6. They disguise themselves during the research by wearing wigs and masks.
7. No. Squirrels were eating the peanuts but did not associate the reward relationship between the coins and the peanuts.
8. Something mutually beneficial like cleaning up after stadium events.
